

Clinical Trial Protocol

Iranian Registry of Clinical Trials

06 Jul 2026

A noncontrolled clinical trial to study of the effectiveness of Alcohol, Smoking and Substance Involvement Screening Test (ASSIST)-linked brief intervention according to Specific Substance Involvement Score in substance users referred to the Primary Health Care Setting: A pilot study

Protocol summary

Summary

This study conducted as a pilot study to evaluate the effectiveness of Alcohol, Smoking and Substance Involvement Screening Test (ASSIST)-linked brief intervention on substance use disorders. In seven Primary Health Care Centers in Garmsar (Semnan Province) and Shahriar (Tehran Province), screening of the substance use disorders will be done using Alcohol, Smoking and Substance Involvement Screening Test (ASSIST). Thirty patients whose Specific Substance Involvement Score are 4-26 (9-26 for alcohol involvement, nicotine excluded) will enter. They are between the ages of 18 and 64 years. Sex ratio will be 2:1 (male to female). Intoxication or withdrawal syndromes are the main exclusion criteria. Individuals currently in drug treatment or they are injecting substance more than 4 times a month will be excluded, too. For all participants ASSIST-linked brief intervention will be done in one session. After three months, all participants will be interviewed and Specific Substance Involvement Score will be recorded again. Scores before and after intervention will be compared.
