The effect of combination use of pentoxifylline and L-carnitine on Idiopathic Oligoasthenoteratozoospermia

Protocol summary

Summary

The main objective of this double-blind prospective clinical study is to evaluate the combined effects of pentoxifylline (PX) and L-carnitine in improving the quality of sperm parameters in infertile men with idiopathic (iOATS) oligoasthenoteratozoospermia and help to enhance Assisted reproductive technique (ART) rankings choice. The main inclusion criteria was infertile men with iOATS and also main exclusion criteria was infertile men with known OATS, 255 infertile men with iOATS allocated in a double-blind, placebo-controlled randomized clinical trial (DBRCT) and finally 212 men finished the study. They randomized to four groups. Group one received 400 mg PX/ and 400 mg L-carnitine twice daily, group two 400 mg PX/ and placebo twice daily, group three 400 mg L-carnitine with placebo twice daily and group four received PX placebo with L-carnitine placebo tablets twice daily for 3 months. From patients of all groups two semen samples (one before and one after intervention) were evaluated. Semen parameters of sperm concentration, total and fast progressive motility (%) and morphology (%) were analyzed for each sample and also according to quality of sperm parameters they categorized for ART procedures rates

Scientific title

The effect of combination use of pentoxifylline and L-carnitine on Idiopathic Oligoasthenoteratozoospermia

Public title

The effect of combination use of pentoxifylline and L-carnitine on sperm-analysis of Idiopathic Oligoasthenoteratozoospermia patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria :infertile men with Oligoasthenoteratozoospermia; men with age between 25- 40 years old; men without history of medical or

surgery for infertility ;men with wives with ages between 20 - 35 years old and or with no known female fertility risk factors . Exclusion criteria:infertile men with Oligoasthenoteratozoospermia with known etiologies.

Age

From **25 years** old to **40 years** old

Gender

Male

Health conditions studied

1

Description of health condition studied

male infertility

ICD-10 code

N46

ICD-10 code description

male infertility

Primary outcomes

1

Description

spermogram parameters change

Timepoint

after intervention

Method of measurement

spermogram

2

Description

Assisted reproductive technic rates

Timepoint

before intervention

Method of measurement

spermogram

Secondary outcomes

1

Description

spermogram improving

Timepoint

after 3 months from intervention

Method of measurement

spermogram

2

Description

qualification of Assisted reproductive technic rates

Timepoint

3 months after intervention

Method of measurement

spermogram

Intervention groups

1

Description

The intervention group one consumed orally 400 mg pentoxifylline and 400 mg L-carnitin twice daily for 3 months

Category

Treatment - Drugs

2

Description

The intervention group two consumed orally 400mg pentoxifylline and placebo twice daily for 3 months

Category

Treatment - Drugs

3

Description

The intervention group three consumed orally 400mg L-carnitin and placebo twice daily for 3 months

Category

Treatment - Drugs

4

Description

The control group fourth consumed orally two type placebos twice daily for 3 months

Category

Treatment - Drugs
