The effect of acupressure on sleep quality and anxiety in hemodialysis patients

Protocol summary

Summary

This controlled clinical trial and double blind study will conduct to determine the effectiveness of acupressure on sleep quality and anxiety in hemodialysis patients. 75 hemodialysis patients will select from Bushehr hospitals via convenience sampling, then the subjects will allocate into three groups (intervention, placebo and control group) by using stratified random allocation. At least six months history of hemodialysis and greater than five score in Pittsburgh Sleep Quality Index, ages from 18 to 65 years, are necessary for including to the study. Subjects in intervention group will receive acupressure in true acupoint (hand Shenmen, PC6 and Yintang points) three times a week for one month, placebo group will experience massage in pseudo points with about 1 to 1.5 cm distance near to the true points (hand Shenmen acupoints) and no intervention will do in control group. Intervention will be take place in hemodialysis unit by two trained practitioners. Pretest and posttest for measurement of sleep and anxiety will do by using Pittsburgh Sleep Quality Index, Sleep Log and Spielberger State Trait Anxiety Inventory (STAI).

Scientific title

The effect of acupressure on sleep quality and anxiety in hemodialysis patients

Public title

The effect of Acupressure on sleep quality and anxiety

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: age from 18 to 65 years; at least 6 months history of hemodialysis; three times hemodialysis in a week and four hours for each session; five or greater score in Pittsburgh Sleep Quality Index; having complete alertness, hearing and speech ability; having the ability to read and write; not having developing a psychiatric disorders which lead to consumption of psychiatric

drugs; cancer; lupus erythematosus; dermatological disease; advanced heart failure; stroke; amputation; sore, infection or fistula in acupoints; Carpal Tunnel Syndrome (CTS). Exclusion criteria: Patient hospitalization in intensive care unit, consumption of psychiatric drugs and distortion in mental status, death during intervention; the incidence of severe stressful event such as the death of someone close; not wanting to continue participation; travel; surgery and transplants lead to exclusion of subjects from the study.

Age

From **18 years** old to **65 years** old

Gender

Health conditions studied

1

Description of health condition studied

Chronic Renal failure

ICD-10 code

N18.5

ICD-10 code description

Chronic kidney disease, stage 5 (on dialysis)

Primary outcomes

1

Description

Quality of sleep

Timepoint

Before intervention and a week after four weeks intervention

Method of measurement

Pittsburgh Sleep Quality Index and Sleep Log

Secondary outcomes

1

Description

Anxiety

Timepoint

Before intervention and a week after four weeks intervention

Method of measurement

State Trait Anxiety Inventory (STAI)

Intervention groups

1

Description

Intervention group: Acupressure will be done on true acupoints (hand Shenmen, PC6 and Yintang) by using 3 to 4 kg pressure, with the practitioners' thumb in a period of two revolutions per second. The intervention will conduct three times a week for a month.

Category

Other

2

Description

Placebo group: Massage will be done in pseudo points with about 1 to 1.5 cm distance near to the true acupoints three times a week for a month.

Category

Other

3

Description

Control group: Without any intervention. During the study, if any intervention is required to modifying

patients' anxiety and sleep disturbance, they will be excluded from study.
