Clinical Evaluation of Working Length Determination by Electronic Apex-Locator or Radiography on Adequacy of Final Working Length

Protocol summary

Summary

The aim of this study is to compare the adequacy of working length in root canal therapies in which length determination is done by one of these two methods; radiographic or electronic measurement. Inclusion criteria are need for Endodontic treatment and age of 20-65 years. Exclusion criteria are open apices and blocked canals. Sample size is 280 canals from all types of tooth selected from all patients admitting to endodontic speciality clinic. Patients will be randomly allocated to group A, in which length determination will be done by Root ZX electronic apex locator, and group B, in which length determination will be done by conventional radiography. The primary outcome is adequacy of length which will be assessed after completing treatment by two endodontists blinded to group allocation by evaluating final and master cone radiographies. Adequacy of length is graded by this classification: short (tip of gutta is shorter than 2mm from the apex), adequate (between 0-2 mm of the apex), and over (obturation material is extended over the apex).

Scientific title

Clinical Evaluation of Working Length Determination by Electronic Apex-Locator or Radiography on Adequacy of Final Working Length

Public title

Clinical Evaluation of Working Length Determination by Electronic Apex-Locator or Radiography on Adequacy of Final Working Length

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion Criteria: All the patients who are referred for Root Canal Therapy
Exclusion Criteria: Blocked Canals, Open Apices

Age

From **20 years** old to **65 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **172**

Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied

Root Canal Therapy

ICD-10 code

K04

ICD-10 code description

Diseases of pulp and periapical tissues

Primary outcomes

1

Description

Adequacy of final working length

Timepoint

Only one time after finishing Root Canal Therapy

Method of measurement

Evaluation of length adequacy of Master Cone Radiography

Secondary outcomes

1

Description

Length adequacy of Obturation

Timepoint

Once after finishing Obturation

Method of measurement

Evaluation of length adequacy in final radiography

Intervention groups

1

Description

3rd generation Apex locator in the intervention group

Category

Diagnosis

2

Description

radiographic length measurement in control group
