Thrombolytic Therapy Plus Anticoagulant Versus Anticoagulant Alone In Sub Massive Pulmonary Thrombo Embolism: (A Randomized clinical trial)

Protocol summary

Summary

The aim of this study is to compare thrombolytic therapy plus anticoagulant ,versus anticoagulant alone in patients with submassive pulmonary thromboemboli;Patients with acute pulmonary emboli who have documented pulmonary emboli in CT angiography with at least one of these criterias:1-Right ventricular dilatation and dysfunction or 2- Pulmonary artery hypertention in echocardiography , are enrolled in our study.Patients are excluded of study if they have : arterial hypotension; left heart or valvular disease ; and contraindication to anticoagulant or thrombolytic. 50 patients with sub massive pulmonary emboli who are admitted in Loghman Hakim hospital enrolled in this study sequentially. Patients randomly assign to receive thrombolytic(Streptokinase 1500000unit or Alteplase 100mg/2 hours) plus Enoxaparine 1mg/kg/2 times a day for one week or only Enoxaparine 1mg/kg/2 times a day for one week. The primary out come is in hospital death or clinical deterioration requiring an escalation of treatment.
