

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

The effect of preemptive analgesia with (Gabapentine, Celecoxib, Acetaminophen) on pain and anxiety score after femoral fractures surgery

Protocol summary

Summary

(1) Objectives: evaluate the effect of three pre- drug combinations of gabapentin , celecoxib , and acetaminophen in reducing anxiety, pain , need for postoperative morphine consumption and side effects in adult patients were Distal femoral fracture surgery plating. (2) Design: Randomized controlled trial. (3) Setting and conduct: Sample size of 100 patients will randomly assign into intervention (preemptive analgesia) or control (placebo) group and will be treated in academic orthopedic hospital. (4) Inclusion criteria: age between 25 to 45 years, ASA versus I and II. Exclusion criteria: failure of spinal anesthesia or if take more than 90 minutes. (5) Interventions: one hour before surgery, under the direct supervision of a nurse who was unaware of the status of drug or placebo to patients three oral gabapentin (600 mg dose), celecoxib (200 mg dose) and acetaminophen (500 mg dose) plus 50cc water is fed to the case group and control group given a placebo. (6) Main outcome measures: Primary outcome is VAS score of pain which will be assessed at 1, 2, 3, 4, 8 and 12 hour after surgery, the first analgesic request after resolution of spinal anesthesia, opioid consumption and respiratory rate, pulse oximetry, heart rate, blood pressure and other side effects mentioned temporal resolution within 24 hours checked, STAI anxiety criteria.

Scientific title

The effect of preemptive analgesia with (Gabapentine, Celecoxib, Acetaminophen) on pain and anxiety score after femoral fractures surgery

Public title

The effect of preemptive analgesia on pain

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: patients candidates for surgery under spinal anesthesia plating of distal femur; aged between 25 to 45 years; patient satisfaction; ASA (American Society of Anesthesiologists class I and II) Exclusion criteria: presence of underlying conditions (such as diabetes) or organ failure; history of drug or alcohol addiction; history of cardiovascular problems or heart stroke; history of allergy to opioids and gabapentin and celecoxib; renal dysfunction; multiple trauma; obesity (BMI greater than 35); pathologic fractures; and people that receive housing long time for any reason.

Age

From **25 years** old to **45 years** old

Follow-up examination after treatment of fracture

Primary outcomes

1

Description

pain

Timepoint

1,2,3,4,8,12 heures after surgery

Method of measurement

vas score

2

Description

anxiety

Timepoint

1,2,3,4,8,12 heures after surgery

Method of measurement

STAI

Secondary outcomes

empty

Intervention groups

1

Description

One hour before surgery, are given a placebo to control group patients.

Category

Placebo

2

Description

one hour before surgery , three-dose oral gabapentin 600 mg, celecoxib 200 mg and 500 mg of acetaminophen with 50 cc of water is fed to case group patients

Category

Treatment - Drugs
