Double blind Randomized Clinical trial of Comparison between Vaseline and Sterile Ophthalmic Vitamin A ointment effect, in treatment of Exfoliative Cheilitis in Girls Dormitory of Shahid Sadoughi University of Medical Sciences

Protocol summary

Summary

Exfoliative cheilitis is an inflammatory condition which is accompanied by regular peeling of superficial keratin layer on lips. The unpleasant appearance and dryness of lips in this condition could be the cause of complaint and discontent in patients. The aim of this study was to compare the therapeutic effect of Vaseline with Sterile ophthalmic Vitamin A ointment in Exfoliative cheilitis treatment. In this clinical trial study, 30 female patients who had this lesion, from the Dormitory of Medical Sciences University, were selected and divided randomly and double-blinded into two groups of Vitamin A and Vaseline. The patients applied the drug topically, 3 times daily for 1 week as directed. Improvement of both groups, which include the severity and size of lesions were measured before drug usage and on the 2nd, 4th and 7th day after drug usage and the results were reported. Inclusion criteria include lack of systemic disease and non-consumption of drugs which make the skin dry. Exclusion criteria include non-cooperation while doing the study.

Scientific title

Double blind Randomized Clinical trial of Comparison between Vaseline and Sterile Ophthalmic Vitamin A ointment effect, in treatment of Exfoliative Cheilitis in Girls Dormitory of Shahid Sadoughi University of Medical Sciences

Public title

Comparison of the therapeutic effect of Vaseline and Sterile ophthalmic Vitamin A ointment in treatment of Lip dryness

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: lack of systemic disease, non consumption of drugs which make the skin dry. Exclusion criteria: non-cooperation while doing the study

Age

From **18 years** old to **24 years** old

Gender

Female

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **30**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Double blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

Double blind means neither the researcher nor the patients know about the type of used drug in the accomplished study. Randomization: using the random-number table, 30 participated patients in the study, were divided into two groups of 15.
