The effect of empowerment program on mother infant attachment in nulliparous women

Protocol summary

Study aim

Effects of an empowerment program on the mother infant attachment in nulliparous mothers

Design

In this clinical trial study, 80 nulliparous mothers who are eligible to enter the study are selected. The mothers are randomly divided into two groups of control and intervention.

Settings and conduct

This clinical trial will be done in the women ward of Imam Sajjad Hospital and Sohrab Ali Bakhshi Health Center in Shahriar city. An empowerment educational program will be done for the mothers in the experimental group at last month of pregnancy, while the mothers in the control group only received the routine care of during pregnancy. Then, the first day of birth of the neonates in the hospital, using maternal attachment questionnaire to the neonate, observed and recorded the mother's attachment behaviors during lactation and without mother's knowledge within 15 minutes.

Participants/Inclusion and exclusion criteria

Inclusion criteria: Pregnancy is monogamous; The age range of the mother is between 16-35 years old; All mothers have normal delivery; The baby is not from IVF or infertility. Exclusion criteria: Pregnancy is Polygons; Mothers aged less than 16 years or more From 35 years of age; Cesarean section delivery; The neonate born to IVF or infertility.

Intervention groups

An educational program will be conducted by a researcher and lecture and a group using a projector video for mothers. The training includes the first session: Primary care education for the newborn, Second session: Training the symptoms of the risk and disease in the newborns, and the third session: Developmental care education.

Main outcome variables

Attachment of nulliparous women to their neonates.

Randomization (investigator's opinion)

Randomized

Randomization description

The choice of mothers in two groups of control and Intervention is done randomly using a random number table of statistics reference books. the first researcher will put a finger on the table while his eyes are closed and the touching number will be the starting point, then the researcher moves up and down, and right and left, respectively, from the numbers to obtain the sample size of use he does.

Blinding (investigator's opinion)

Single blinded

Blinding description

Mothers participating in research. The mothers of each group are unaware of the other group and the

interventions they are doing.
