Effects of altered auditory feedback on stuttering frequency of people who stutter

Protocol summary

Summary

Objective: The aim of present study is to investigate the effects of different altered auditory feedback conditions, including delayed auditory feedback (DAF) and frequency altered feedback (FAF), on stuttering frequency by means of percentage of syllables stuttered in persons who stuttered during monologue speech production. **Methods:** 22 persons who stuttered aged above 17 years will produce 14 monologue speech samples and 308 samples in total during 2 sessions under 6 different altered auditory feedback conditions and one control condition by Fluency Coach Software.

Scientific title

Effects of altered auditory feedback on stuttering frequency of people who stutter

Public title

Effects of altered auditory feedback on stuttering

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Developmental stuttering diagnosis by speech and language pathologist; chronological age at least 17 and above; Hearing threshold levels within normal limit; No other speech treatments during the research. Exclusion criteria: Lack of tendency to continue and cooperate in research; Using behavioral stuttering reduction strategies.

Age

From **17 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: 22
