Implimenting and evaluation of the effectiveness of a geriatric dentistry educational course on knowledge, attitude and practice of the last year students of general dentistry in Tehran

Protocol summary

Summary

Objective: To evaluate effectiveness of a geriatric dentistry educational course for the last year students of general dentistry in Tehran. Interventional design will be non-random. Study population include all the senior dental students of Tehran University of Medical Sciences as intervention group and all the senior dental students of Shaheed Beheshti University of Medical Sciences as control group. Inclusion criteria: all volunteer senior dental students of the two dental schools. Exclusion criteria: non- volunteer junior dental students of the two dental schools. Sample size: All the senior students of the two dental schools will be included in the study, although minimum sample size of 64 (32 in each group) is calculated. Intervention: an educational course in 3 sessions in a one week to ten days period, as a part of practical community oral health course is designed for the intervention group. The first session includes two 45 minutes lectures by two university teachers about geriatric dentistry. A booklet containing educational material will be given to the intervention group. In the second session the students of intervention group will go for a geriatric field to conduct the clinical examination, learn how to communicate properly, take medical and dental history and investigate the treatment needs. In the last session students will present and discuss their findings in the field. Both intervention and control groups will fill a questionnaire regarding geriatric oral health before and after intervention. Intervention time: 2014-2015 educational years. Outcome: change in knowledge, attitude, practice.
