Effect of probiotic yogurt consumption on Streptococcus mutans and Lactobacilli counting in students with initial stages of dental caries

Protocol summary

Summary

The aim of this study is examining the effect of short-term consumption of probiotic yoghurt containing Bifidobacterium lactis on the amount of salivary Streptococcus mutans and Lactobacilli in young adults with caries in primary stages . The study was designed as a randomized , preventive clinical trial . A total of 66 subjects (18-30 years old), signed informed consent , has been divided to intervention and control groups In this study . The study group adults has taken 300 grams of probiotic yoghurt containing Bifidobacterium lactis daily and the control group individuals has taken 300 grams of usual yoghurt for 2 weeks . Anthropometric measurements and 2 milliliters of fasting saliva was assumed before and after the intervention for microbiological examinations from the volunteers.
