The effect of educational intervention based on Pender's Health Promotion Model on oral and dental health behaviors among high school students

Protocol summary

Summary

Objectives; Evaluation of the effect of educational intervention based on Pender's Health Promotion Model on oral and dental health behaviors among high school students in Talish city. Design; This study is a random control trial that was carried out on 172 high school students, using two-stage sampling method in Talish city, in 2014. Setting and conduct; Samples were divided randomly into two groups, control and intervention. Data collection tool was a validity and reliability assessed questionnaire, designed on the Health Promotion Model. Educational intervention was designed based on the data collected from pre-test and carried out in five 50 to 60-minute sessions within four weeks on intervention group. Post-test data were collected two weeks and three months after educational intervention and were analyzed in SPSS 18 software, using statistic tests including independent T-tests, Mann-whithneyu, Wilcoxon, Paired t-tests, ANOVA and Chi-square. Inclusion criteria; Voluntary participating in study, Studying in 2nd grade of high school Exclusion criteria; The fail of the participating in each of the training sessions, The lack of consent to continue in study. Main outcome; improving the students' oral health behaviors

Health conditions studied

1

Description of health condition studied

Oral health behaviors

ICD-10 code

Z72.9

ICD-10 code description

Problem related to lifestyle, unspecified

Primary outcomes

1

Description

Dental Plaque

Timepoint

before intervention, two weeks after intervention, three
 months after intervention

Method of measurement

Dental examination

2

Description

Oral Health behavior

Timepoint

before intervention, two weeks after intervention, three
 months after intervention

Method of measurement

Questionnaire

Secondary outcomes

1

Description

tooth brushing

Timepoint

before intervention, two after intervention, three months
 after intervention

Method of measurement

questionnaire, check list

Intervention groups

1

Description

Control; no intervention

Category

Lifestyle

2

Description

Intervention group; Educational intervention was
 designed based on the data collected from pre-test and
 carried out in five 50 to 60-minute sessions within four
 weeks.
