The effect of home-based cardiac rehabilitation on fatigue of patients with Coronary Heart Disease

Protocol summary

Summary

This study is a one-group before-after clinical trial will be done to determined the effect of home-based cardiac rehabilitation on fatigue in patients with coronary heart disease. Samples consisted of 50 patients are according to inclusion criteria among patients with coronary heart disease who had referred to the Khorramabad cardiac rehabilitation center will be selected using purposive sampling method. Inclusion criteria included age 70-35 years, stable status of patients to participate in a rehabilitation program, passing 4-6 weeks after discharge, no patient with uncontrolled heart failure, arrhythmias, and unstable angina, non-treated patients with fatigue and sedative agents such as amantadine and the absence of local and systemic reactions in a patient after surgery. Exclusion criteria is non-compliance with recommended sports training and physical disorders and the incidence. Intervention, 4 one-hour sessions over 4 consecutive days face to face training and individual performance. Data will be collected by demographic characteristics questionnaire, patient self-report form at home and Piper Fatigue Scale (PFS). Fatigue before and 8 weeks after the intervention will be measured.

Scientific title

The effect of home-based cardiac rehabilitation on
fatigue of patients with Coronary Heart Disease

Public title

Effects of cardiac rehabilitation in the management of
fatigue in patients with Coronary Heart Disease

Purpose

Supportive

Inclusion/Exclusion criteria

(Inclusion criteria: Patients aged 35-70 years; The
patient's vital signs (pulse and respiration) are stable for
the rehabilitation program; 6-4 weeks after the last

patient is discharged; The patient does not have disease limited mobility; Patients with uncontrolled heart failure, arrhythmia's and angina are not flaky;absence of Mental disorders and related drugs; Patients not treated with drugs that reduce fatigue and sedatives such as amantadine and ; The patient has the ability to understand speech in Farsi; The patient is literate; The patient's ability to conduct training sessions of rehabilitation . Patients have access to a phone; Local and systemic complications after surgery is not present and Exclusion criteria: Failure to follow the recommended training and exercise; cancellation and unwillingness to continue the study; the incidence of mental disorders such as hypertension, hyperglycemia, etc.)

Description

The study included 4 one hour education sessions of face to face in 4 consecutive days with content of home-based cardiac rehabilitation and followed for 8 weeks after discharging at patient's home. First session includes learning about diseases, (side effects/ complications) and treatment, and cardiac rehabilitation simply. The second session includes education and prevention of risk factors, including smoking (smoking cessation training set), high blood lipids, hypertension, weight gain and stress. The third session consisted of diet and drug regimen in these patients. The fourth session included instruction on simple physical activity with an emphasis on hiking, sports are allowed in this group of patients and how to control pulse during exercise. At the end of the fourth session review and discuss the three sessions before and training manual of run training sessions are available to patients and Then the patient is asked for planned exercise three times per week for 8 weeks. According to above and the need to measure learning in different time intervals, immediately after training the evaluation of patients' rehabilitation center will be performed. Also, after the completion of the rehabilitation program at the end of the fourth week once home visit by the researcher will be made to control the rehabilitation program, trainings presented, solve problems and answers to possible questions. Then the patient will be asked to mark the adhere to teaching in the home care form that will be give to patients.Note that this form will also be available to researchers and During the 8-week intervention, the researcher will contact with patients once a week to emphasize on the

concepts taught, ensure of doing the exercises and in the event of a problem, go back to their homes. Also the phone number of researcher will give to patients to contact in case of any problem or question. At the end of 8 weeks of intervention with visit the patients in their homes, they will be asked to fill questionnaire fatigue again
