The effect of gabapantin in the controlling pain after laparoscopic cholecystectomy

Protocol summary

Summary

Pain is prevalent after laparoscopic cholecystectomy surgery and it is necessary to find out a solution to control it. We evaluate the effect of Gabapantin in controlling the pain after laparoscopic cholecystectomy surgery. One of the advantages of this drug is that, it is used single- dose and reduces the request of other analgesics. It has some complication such as confusion and moving disorder and rare cases as leucopenia .70 individuals are randomly selected and divided into 2 groups. Plesebo is given to 35 individuals as a control group; The effect of Gabapantin 300 mg is assessed on the other 35 individuals. All 2 groups are identically anesthetised and are controlled each 2 hours to 18 hours and the results are listed in checklist.

Description of health condition studied

colectomy laparoscopy

ICD-10 code

K80

ICD-10 code description

Cholelithiasis

Primary outcomes

1

Description

pain

Timepoint

2 hours

Method of measurement

VAS and check list and physical examination

Secondary outcomes

1

Description

tremur

Timepoint

each 2 hours

Method of measurement

check list and physical examination

2

Description

nausea and vomiting

Timepoint

each 2 hours

Method of measurement

check list physical examination

3

Description

confusion

Timepoint

each 2 hours

Method of measurement

check list and physical examination

Intervention groups

1

Description

300 mg of gabapantin 1 hour before operation.

Category

Prevention

2

Description

placebo 1 hour before operation.

Category

Placebo
