The necessity of urodynamic test in the patient with urine stress incontinency to identify patients and improve their quality of life after TOT (Transobturator) surgery.

Protocol summary

Summary

OBJECTIVE: The necessity of urodynamic test in the patients with urine stress incontinency to identify the patients and improve their quality of life after TOT (Transobturator) surgery. **Study design:** A randomized clinical trial study. **Inclusion criteria:** Women between 21 and 45 years old; stress urinary incontinency for 3 months; desire for surgery; negative urinalysis and urine culture. **Exclusion criteria:** Urinary retention in absence of prolapse; previous pelvic surgery in the last 3 months; previous surgery for urinary incontinency; prolapse(grade 2); urination urgency; uncontrolled diabetes; urinary tract or bladder cancer; Pelvic Surgeries. **INTERVENTION:** 48 women with urinary incontinency divided into two groups: 24 patients were randomly assigned to one of two groups. Patients in the first group will be selected for trans-obturator surgery after Urodynamic test and patients in the second group will be selected based on the questionnaire for trans-obturator surgery. After trans-obturator surgery in both groups, the results of the surgery and quality of life (IQOL questionnaire) is going to be compared after 1 and 6 months after surgery.
