Comparison of efficacy of traditional medication of Henna and Hydrocortisone ointment 1% on diaper dermatitis healing among infants

Protocol summary

Summary

The aim of this study was to compare the effectiveness of topical application of traditional medicine products "Henna", and %1 Hydrocortisone ointment on treatment level of diaper dermatitis in children under two years old. This study was a double blind randomized clinical trial. Eighty-eight infants under two years, referred to a hospital clinic with diaper dermatitis were selected and divided randomly into two groups. Then the mothers were instructed to put the ointment on the affected area three times daily after cleaning and washing there. The severity and extension of dermatitis areas was measured at first, third and the fifth day after intervention and the rate of recovery were compared in both groups.

Scientific title

Comparison of efficacy of traditional medication of Henna and Hydrocortisone ointment 1% on diaper dermatitis healing among infants

Public title

Comparison the effect of traditional medication of Henna and Hydrocortisone ointment 1% on diaper dermatitis

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: The Infants under 24 months. Exclusion criteria: Existence of known diseases that need special treatment; The use of other drugs for healing diaper dermatitis; The use of antibiotics during research; Existence diaper dermatitis due to fungal that diagnosed by Pediatrician

Age

From **1 month** old to **2 years** old

Gender

Both

Phase

2-3

Groups that have been masked

No information

Sample size

Target sample size: 88

Health conditions studied

1

Description of health condition studied

Diaper dermatitis

ICD-10 code

L22

ICD-10 code description

Diaper [napkin] dermatitis

Primary outcomes

1

Description

The severity of dermatitis

Timepoint

Baseline, days 3 and 5 of study

Method of measurement

Six-point scale for severity of diaper dermatitis

Secondary outcomes

1

Description

Dermatitis extent- Side effects

Timepoint

Baseline, days 3 and 5 of study

Method of measurement

Checklist

Intervention groups

1

Description

Group 1: To use traditional product of henna three times
a day after diaper change.

Category

Treatment - Drugs

2

Description

Group 2: To use one percent hydrocortisone ointment
twice daily for the affected area.

Category

Treatment - Drugs
