

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Comparison the effects of individual and group education on sexual function and satisfaction among postmenopausal women in Iran.

Protocol summary

Summary

Objective: Comparison between the effects of individual and group education on sexual function and satisfaction in menopausal women. Research entrance criteria: Married menopausal women; those aged 45-60 years old; obtaining the score 50-100 on the sexual satisfaction test questionnaire; obtaining lower than 5/26 on the sexual function index test. Research exclusion criteria: Individual's or her husband's suffering from any medical disease. Statistical population: All the menopausal women referring to Andimeshk Health and Treatment Center, Khuzestan Province, Iran. The sample size included 60 patients. The individuals were randomly placed into two groups. In individual education, the participants receive four 60-minute sexual training sessions in the form of lecture as well as question and answer (once a week) over one month. In group education, the participants receive four 60-to-90-minute sexual training sessions in the form of lecture as well as question and answer at the Health Center (once a week) over one month. Training sessions include : session (1): menopause and sexual physiologic changes; session (2): women's sexual function; session (3): women's sexual satisfaction; and session (4): conclusion and treatment strategies. At entering the study, some questionnaires on women's demographic data, sexual satisfaction, and sexual function index are completed for all the samples. The individuals, who obtain 50-100 on the sexual satisfaction test questionnaire and lower than 5/26 on sexual function index questionnaire, are selected for the study. Then, sexual function index and sexual satisfaction questionnaires are completed for the individuals in both groups one and four weeks after training, and the results are then compared.
