The effect of educational intervention based on Health Belief Model in creating AIDS prevention behaviors in female high school students

Protocol summary

Summary

1-Objectives: The aim of the study is to evaluate the effect of educational intervention based on Health Belief Model in creating AIDS prevention behaviors in female high school students. 2-Design: This experimental and single-blinded study will be done on 64 female students on the third year in Aq-Qala high school. 3-Setting and conduct: Two high schools will be selected from rural and two high schools will be selected from urban and will be divided into experimental and control group through simple random sampling. Two classes from each school will be selected randomly, so that 32 and 32 students will be considered as experimental and control group respectively. 4-Participants including major eligibility criteria: Criteria are studying at the third year in high school. 5-Intervention: The intervention in experimental high school consisted of holding the 1 training session for two hours by Public health expert. 6- Main outcome measures: After 4 weeks, information's students will be compared with before the intervention in Knowledge, perceived susceptibility, perceived severity, perceived benefits and perceived barriers scopes, by using a reliable and valid questionnaire that was developed based on Health belief model.

Scientific title

The effect of educational intervention based on Health Belief Model in creating AIDS prevention behaviors in female high school students

Public title

The effect of education in creating AIDS prevention behaviors

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion Criteria: Studying at the third year in high

school Exclusion criteria: Unwillingness to participate in the study

Age

From **15 years** old to **19 years** old

Gender

Female

Phase

1

Groups that have been masked

No information

Sample size

Target sample size: **64**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Single blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

Randomization will be done based on envelopes closed

Secondary Ids

empty

Ethics committees

Health conditions studied

1

Description of health condition studied

AIDS

ICD-10 code

B 24

ICD-10 code description

Acquired immunodeficiency syndrome [AIDS] NOS AIDS-related complex [ARC] NOS

Primary outcomes

1

Description

Knowledge

Timepoint

Before the experiment, 1months after the intervention.

Method of measurement

Health belief model Questionnaire

2

Description

Perceived susceptibility

Timepoint

Before the experiment, 1months after the intervention.

Method of measurement

Health belief model Questionnaire

3

Description

Perceived severity

Timepoint

Before the experiment, 1months after the intervention

Method of measurement

Health belief model Questionnaire

4

Description

Perceived benefits

Timepoint

Before the experiment, 1months after the intervention

Method of measurement

Health belief model Questionnaire

5

Description

Perceived barriers

Timepoint

Before the experiment, 1months after the intervention

Method of measurement

Health belief model Questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: Holding the 1 training session for two hours by Public health expert

Category

Prevention

2

Description

Control group: No action
