### Effect of magnesium supplements as complementary treatment with methylphenidate in children with attention-deficit/hyperactivity disorder

#### Protocol summary

##### Summary

The main objective of this experimental clinical double blind study (for doctor and patients) is to investigate the effect of magnesium as well as methylphenidate supplements on the improvement of Conners questionnaire, hyperactivity, inattention and impulsivity in two groups and then comparison between them. 7-12 age children with ADHD disorders were chosen randomly considering the inclusion criteria including IQ greater than 70, without any psychology disorder and no intake of magnesium at the last two months as well as exclusion criteria such as cutting the intake of the drug, acute physical disease and dispensing of the contribution. They were divided into two 20-membered groups, A and B. Group A would take 0.5 to 1 mg/kg/day methylphenidate tablet with 10 mg/daily magnesium tablets for 8 weeks while the other group (B) would take 0.5 to 1 mg/kg/day methylphenidate tablet with placebo. Parents Conners questionnaire would be filled for all children before and at the end of the study. Changes in score of Conners' Parent Questionnaire is as primary variable of study and side effect is as secondary variable of present study.

#### Approval date

2015-11-09, 1394/08/18

#### Ethics committee reference number

TBZMED.REC.1394.691

## Health conditions studied

### 1

#### Description of health condition studied

Attention deficit hyperactivity disorder (ADHD)

#### ICD-10 code

F90.0

#### ICD-10 code description

Disturbance of activity and attention

## Primary outcomes

### 1

#### Description

Change in score of Conners' Parent Questionnaire

#### Timepoint

Beginig of study and 8 weeks later

#### Method of measurement

Conners' Parent Questionnaire

## Secondary outcomes

### 1

#### Description

Adverse effects

#### Timepoint

8 weeks later

#### Method of measurement

Patient follow up

## Intervention groups

### 1

#### Description

In intervention group: Patients will receive 0.5 to 1 mg/kg/day methylphenidate tablet with 10 mg/daily magnesium tablets for 8 weeks.

#### Category

Treatment - Drugs

### 2

#### Description

In control group: Patients will receive 0.5 to 1 mg/kg/day methylphenidate tablet with placebo for 8 weeks.

#### Category

Treatment - Drugs
