Clinical Trial Protocol
Iranian Registry of Clinical Trials

10 Nov 2026

Comparison anesthetic onset and duration of Citanest and Dentanest in maxillary and mandibullary molars with normal pulps.

Protocol summary

Summary

Objectives : Maxillary Buccal Infiltration and Inferior Alveolar Nerve Block(IANB) are the most common techniques to achieve anesthesia for routine dental procedures of maxillary and mandidular teeth ,respectively . Prilocaine is one of the anesthetic solution which specially practical in some systemic diseases.There are two commercial types of Prilocaine naming Citanest and Dentanest . The aim of this study was to compare the anesthetic efficancy of these two solutions regarding the onset and duration . Design: This study designed randomized cross-over clinical trial. Setting and Conduct : Maxillary Buccal Infiltration and IANB were applied by one trained practitioner and the onset and duration of pulpal and soft tissue anesthesia were measured using EPT and Pin Prick ,respectively every 2minutes for a period of 60 minutes . Subjects with no sign of lip anesthesia 20min after receiving IANB were excluded from the study.The obtained data were analyzed using T-test and Wilcoxon test. Participants including major eligibility criteria : In this study participated 20 healthy subjects which had maxillary and mandibular molars with no caries , large restorations , crowns and periodontal diseases .They written informed consent was obtained from each subject. Intervention : Age , Needle gauge , tooth type , periodontal disease , Injection duration . Measures variables : Onest of pulpal anesthesia in maxillary buccal infiltration , pulpal duration of maxillary buccal infiltration , onset of pulp in IANB , pulpal duration of IANB .

Scientific title

Comparison anesthetic onset and duration of Citanest and Dentanest in maxillary and mandibullary molars with normal pulps.

Public title

Comparison citanest and dentanest

Purpose

Other

Inclusion/Exclusion criteria
Inclusion criteria : Subjects between 18 to 65 yrs ; had not any systemic disease ; they had not used any medication ; had not sensitivity to anesthesia solution ; had not pathology in injection area ; had fist or second maxillary and mandibulary molars Exclusion criteria : Caries and crown and periodontal disease in studied molars ; pragnancy ; systemic disease

Age
From **18 years** old to **65 years** old

Gender
Both

Phase
2-3

Groups that have been masked
No information

Sample size
Target sample size: **20**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Double blinded

Health conditions studied

1

Description of health condition studied
onset and duration of pulpal anesthesia

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
Onset of Pulp and Soft tissue anesthesia

Timepoint
Per 2-minute post injection

Method of measurement
Electric Pulp Tester (EPT) , Pin Prick

Secondary outcomes

1

Description
Duration of Pulp and Soft tissue anesthesia

Timepoint
Every 2- minute post injection

Method of measurement
Electric Pulp Tester , Pin prick

Intervention groups

1

Description
Intervention:1.8ml (one catrige) Dentanest(Perilocaine 3% with 0/03 flypersine) once during 30 to 60 seconds in Maxillary buccal infiltratin and Inferior Alveolar Nerve Block.

Category
N/A

2

Description
Control group : 1.8 ml (one cartrige) Citanest (Perilicaine 3 % with 0/03 flypersin) once during 30 to 60 seconds in Maxillary Buccal Infiltration and Inferior Alveolar Nerve Block .

Category
N/A
