Comparison the effects of teaching communication skills to midwives and their communication behavior with parturient in two methods:role playing and video feedback.

Protocol summary

Summary

This study was conducted to compare the impact of training communication skills applying two methods of role playing and videotape feedback on communication behavior of midwives working in Mashhad educational hospitals in 2014. Some 47 midwives having an academic degree in midwifery, with at least one year working experience in maternity ward and working at different shifts selected among the midwives working in maternity unit of Ghaem, Emam Reza, Shahid Hasheminejad and Om-ol-banin hospitals and randomly allocated in two groups. One get training through role playing method (N=24) and the other through video tape feedback method (N=23). Also, 147 parturient participated in the study before and 147 parturient 2-4 weeks after the interventions (3 per each midwife) to evaluate the communicative behavior of these midwives. The midwives who didn't present completely in workshop session were excluded from the study. The interventions included two communication skills training workshops held for two days. In the first day, participants in two groups received education on communication skills by lecture, slide show and answer and question followed in second day by different teaching methods. In role playing group, the training was done in center for clinical skills in Nursing and Midwifery School. Education was run through four scenarios of communication with the parturients in four domains of admission, labor, delivery and post partum periods. In video tape feedback group, the videos that recorded the communication between participants and mothers in four mentioned domains were demonstrated. After that participations performed discuss and critiques on their own and their colleagues' behaviors showed on the videos. Evaluation of midwives communicative behavior was done in their working place applying 3 check list filled by researcher during the observation of the midwife-parturient communication in

3 of 4 mentioned domains. The communicative behavior of each midwife was also evaluated by 3 different parturient in 3 of 4 mentioned domains.
