Comparison of the effects of Standardized Patient and workshop methods of teaching on midwifery students' clinical skill in providing sexual health counseling

Protocol summary

Summary

The aim of this study was to compare the effect of "training the sexual health counseling" applying two methods of "standardized patient based education" and "educational workshop" on midwifery students' clinical skill in providing sexual health counseling. In this study 62 undergraduate or postgraduate midwifery students who studied at Mashhad University of Medical Sciences in 2014 and passed the theory course of sexual disorders were selected and randomly allocated in standardized patient based or workshops groups. Students were excluded if they absent in one of training or pre or post tests sessions. Intervention in each group included 10 hours of education hold in two-days. Students' skill in providing sexual health counseling was evaluated by trained raters using objective structured clinical evaluation in 5 stations, applying validated check lists before and two weeks after the education.

Intervention groups**1****Description**

Intervention 1: In standardized patient-based group, the educational content include definition and fundamentals of sexual health counseling, sexual history taking, normal intercourse, sexual activity during pregnancy, breast feeding and menopause and sexual disorders that were delivered using lecture, slide show and questions and answers in the first day. On the second day the students were divided into five small groups. Education was performed with 5 standard patients with different complains that played five different scenarios. In each small group, students practiced the sexual history taking, diagnosis and treatment for one of standardized patients for 30 minutes. Then all groups joint in a large group and in each session that lasted for nearly 50 minutes, a student from each group, took a sexual history from a SP that previously practiced in small group and presented her diagnosis and treatment plan and answered to the students' questions in this regard. Ultimately researchers presented the required complementary explanation about the SP's complaint and summarized the discussion.

2**Description**

Intervention 2: In workshop group, the educational content and teaching methods were similar to the standardized patient group on the first day. On the second day students were divided into six small groups and each group had 5 times of small group discussion. In each time, they studied a case and discussed about it in 30 minutes. The cases were similar to scenarios of standardized patient of previous group. After each session of discussion about the cases, the small groups joint together and during the next 30 minutes, one of the students presented the results of their group discussion and answered to the students' questions in this regard. Ultimately researchers presented the complementary explanation about each case and answered the students' questions.
