The effect of an educational program based on the theory of planned behavior in promotion of blood donors among stuffs

Protocol summary

Summary

This study aims at investigating the effect of education based on the theory of planned behavior in promotion of blood donors among staffs. The design of the study is pre-test post-test quasi-experimental design. The study population was the staffs without a history of blood donation recode in the selected Office in Arak. Sample size was equal to 120 staffs without a history of blood donation that multi-stage random was used to selected based on simple random sampling and are assigned to intervention group (n=60) and control group (n=60) randomly. The data are gathered via a standard questionnaire whose validity and reliability are assured in advance. Inclusion criteria: official city employees staffs without a history of blood donation. Exclusion criteria: unwillingness to participate in the study; the absence of training sessions. The educational intervention for the intervention group is done via holding an interactive educational workshop, presenting an Educational booklet as a reminder. The control group receive their routine education. The primary outcome: promotion of blood donors among staffs. The Secondary outcomes: change attitude, improve intention and practice
