The Effect of Holy Quran Recitation on physiological indicators related to venipuncture pain on hospitalized premature infants in the NICU

Protocol summary

Summary

Objective: To investigate the effect of Holy Quran on physiological indicators of pain caused by venipuncture on preterm infants in the NICU. Inclusion Criteria Consisting of: Newborn babies weighing 1500 to 2500 g, Gestational age at birth at 29 weeks and a maximum of 36 weeks and Needing to the Venipuncture. Exclusion criteria: Infants during the study of abnormal physiological responses such as heart rate greater than 200 or less than 80% reduction in blood oxygen saturation to show, Any problem in registration of physiological responses. In this double-blind study that both participants and researchers who will registrar signs are unaware from type of intervention, 48 infants were randomly assigned eligible in both test and control (Mode A control group and Mode B test group) will be. The test group consisted of Surah Yasin and verses 1-67 Quran recitation Surah Rahman Saad Al-Ghamdi master the sound will be play by MP3 Player with Headphones. Quran recitation will play 5 minutes before Venipuncture and will continue to 10 minutes after Venipuncture. signs registratation for each group 10 minutes before to 20 minutes after Venipuncture every 5 minutes for 30 minutes will be continue.All procedures were performed in the control group except Quran recitation. Expected outcomes include decreased heart rate and respiratory rate And increasing the percentage of arterial oxygen saturation.

General information
