The effect of pomegranate juice consumption on sperm parameters , structure of chromatin of sperm nucleus and sperm apoptosis in infertile men

Protocol summary

Summary

The aim of this study is to determine the effect of pomegranate juice (PJ) on sperm parameters including count, motility and morphology, also the rate of sperm apoptosis and DNA structure of sperm. Sample is 35 infertile male aged 20-40 years that refer to Yazd research & clinical center of infertility that their sperm analysis showed that at least one of the tree sperm parameters are abnormal. If they are smoker or opioid abuse, have any history of surgery or diseases of reproductive region or any systemic disease , they will be exclude from study. We test sperm apoptosis by TUNEL test and chromatin structure by CMA3 (Chromomycin A3) and SCD(sperm chromatin dispersion), then patients get PJ (from Shadli Co.) 200cc daily for 10 weeks and then all the tests will be repeat. Because of antioxidant activity of PJ, it is suppose that the outcome will be improvement of sperm parameters, decrease of sperm apoptosis and improvement in structure of sperm chromatin.

Scientific title

The effect of pomegranate juice consumption on sperm parameters , structure of chromatin of sperm nucleus and sperm apoptosis in infertile men

Public title

Study the effect of pomegranate juice on infertile male sperm

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: abnormality in at least one of 3 sperm parameters (count, motility or morphology), age between

20 - 40 years old Exclusion criteria: history of cryptorchidism, varicocele, trauma, azoospermia, any surgery on testis region, specific systemic disease, using systemic disease drug, chronic disease drug or any drug to treat genital system, smoking or opioid abuser.

Age

From **20 years** old to **40 years** old

Gender

Male

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **35**

Health conditions studied

1

Description of health condition studied

Azoospermia and Oligospermia

ICD-10 code

N46

ICD-10 code description

Male infertility

Primary outcomes

1

Description

improvement of structure of sperm chromatin

Timepoint

10 weeks after intervention

Method of measurement

CAM3 test & SCD test

2

Description

improvement of sperm parameters

Timepoint

10 weeks after intervention

Method of measurement

sperm analysis with microscope & macler chamber

3

Description

decrease of sperm apoptosis

Timepoint

10 weeks after intervention

Method of measurement

TUNEL test

Secondary outcomes

1

Description

side effect

Timepoint

during of intervention

Method of measurement

following

Intervention groups

1

Description

consumption of pomegranate juice 200cc/day for 10 weeks

Category

Treatment - Other
