The therapeutic effect of oral honey syrup and date syrup on severity of labor pain and duration of active phase in nulliparous

Protocol summary

2015-03-15, 1393/12/24

Summary

This research is a Randomize clinical trial, with the aim of determining the effect of honey syrup and date syrup on severity of physiologic labor pain and duration of active phase in nulliparous. In This study 120 healthy volunteered nulliparous women (40 in each group) with age 20-35 years, and with inclusion criteria, after reading and signing an informed consent will be participate, then will be randomly without replacement in one of three groups of honey syrup, date syrup and control. The honey syrup group will be given 2/5 dessertspoon of honey in 150 ml water and the date syrup group will be given mixture of 6 pieces of date in 150 ml water. The control group will receive only water as a routine. Interventions in both groups will be carried out during active phase (4-7 Cm dilatation) and will continue till 8 Cm Dilatation. labour care and control will be done based on National protocol of preparation for labour and delivery. For controlling the effect of environmental intervention such as noise effect, the study will be done in physiologic labour and delivery room, also for having same one to one care, all care and interventions will be done by same person and assistant will be assess pain. Pain will assess by visual numerical analogue scale (0-10) every 30 minutes.

Scientific title

The therapeutic effect of oral honey syrup and date syrup on severity of labor pain and duration of active phase in nulliparous

Public title

Effect of oral Honey syrup and date syrup on labor pain and duration of active phase in nulliparous

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: Age 20 - 35 years old, with physical and mental health, no history of infertility, without history of allergy to honey and date, with 38-42 weeks of gestational age, cephalic presentation, with physiological labor and delivery conditions, with 4-7 Cm cervical dilatation. Exclusion criteria: Unwillingness to continuing of cooperation in the study, due to maternal/placental or fetal factors entering to conditions of non physiological labor and delivery, more than six hours after membrane rupture.

Age

From **20 years** old to **35 years** old
