Effectiveness of Group education to the partners on social adaptation of women with breast cancer undergoing chemotherapy

Protocol summary

Summary

This study examined the effect of group education to partners on the social adaptation of women with breast cancer undergoing chemotherapy. In this study, 56 women with breast cancer undergoing chemotherapy were included. This study was designed as pretest-posttest with a control group. Patients eligible to participate in the study were randomly assigned into two intervention (28 = n) and control (28 = n) groups. For spouses of patients in the intervention group, six 2-hour sessions were held. Spouses of patients in the control group didn't receive any intervention. Social Adjustment Scale (SAS-m) was completed by patients before and after intervention. Social adjustment in both groups are compared before and after the intervention and with each other.
