Effect of an Epileptic child's Caregiving Empowerment program on self-efficacy of epileptic child's mother

Protocol summary

Summary

This randomized clinical trial study was conducted on Mother's of epileptic children with the age of 1-12 years who hospitalized in Neurology Department of Ghaem Hospital. The aim of this study was evaluate the effect of an Epileptic child's Care-giving Empowerment program on self-efficacy of epileptic child's mother. Eligible mothers were selected via convenience sampling and randomly assigned to experimental (50) and control (50) groups. In experimental group Empowerment care was performed in 5 sessions of 60 minutes and the control group received no intervention. Self efficacy of the mothers was assessed by the Steffens RCSES Questionnaire, before the intervention and 1.5 months after the intervention.
