Effectiveness of transcutaneous electrical nerve stimulation on post elective cholecystectomy paincontrol

Protocol summary

Summary

The aim of this study is to evaluate the Efficacy of Transcutaneous Electrical Nerve Stimulation(TENS) as an analgesic treatment for patients undergoing open cholecystectomy.In this study that will take about a year after proposal registration;80 Patients 20 to 70 years old (men and women) who have been admitted for elective open cholecystectomy are selected after informed consent.Patients were randomly divided into two equal groups and Transcutaneous Electrical Nerve Stimulation(TENS) will be done 5 times for each patient.First dose will be performed immediately after surgery and Subsequent doses will be conducted every 12 hours until the third day after the operation during hospitalization. Same number of sessions will be done for Placebo group with [OFF] device.Pain assessment will be performed by visual analog scale each 12 hours until the third day and day5 & 7 after surgery by Phone call.Finally two groups will be compared after analyzing information.

General information

Acronym

Transcutaneous Electrical Nerve Stimulation(TENS)

IRCT registration information

Scientific title

Effectiveness of transcutaneous electrical nerve stimulation on post elective cholecystectomy paincontrol

Public title

Effectiveness of transcutaneous electrical nerve stimulation on post cholecystectomy paincontrol

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:All of Patients 20 to 70 years (men and women);Patients who have been admitted for elective open cholecystectomy. Exclusion criteria:Patients who did not consent to participate in the study;Patients who their wound is infected for any reason;Patients who have other medical problems in addition to cholecystectomy (ASA II-IV).

Age

From **20 years** old to **70 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Patients who have been admitted for elective open
cholecystectomy.

ICD-10 code

K80

ICD-10 code description

Cholelithiasis

Primary outcomes

1

Description

Pain degree by VAS

Timepoint

Pain assessment will be performed by VAS Each 12 hours
until third day and day5 & 7 after surgery by phone call

Method of measurement

According to visual analog scale

Secondary outcomes

1

Description

Painkillers and Opioid drugs Usage

Timepoint

Daily

Method of measurement

Depending on the dose in milligrams

Intervention groups

1

Description

After the surgery,the first group (control) which is
consisted of 40 patients, in addition to conventional
therapy such as intravenous and oral painkillers treat
with the transcutaneous electrical nerve
stimulation(TENS)device[OFF] (Placebo).Treatment
rounds will be done 5 times for each patient.First time
will be performed immediately after surgery and
Subsequent times will be conducted every 12 hours until
the third day after the operation during hospitalization.

Other

2

Description

After the surgery,The second group (study) which is
consisted of 40 patients, in addition to conventional
therapy such as intravenous and oral painkillers treat
with the transcutaneous electrical nerve stimulation
(TENS)device[ON] also.Laser irradiation will be done 5
times for each patient.First dose will be performed
immediately after surgery and Subsequent doses will be
conducted every 12 hours until the third day after the
operation during hospitalization.
