The comparison of the effect intra tympanic methylprednisolon injection and intra tympanic gentamicin injection in control vertigo in patients with unilateral meniere's disease.

Protocol summary

Summary

This study aims to compare the effect of intra tympanic methylprednisolon injection versus intra tympanic gentamicin injection in vertigo control. Inclusion criteria: Patients with unilateral meniere's disease; Exclusion criteria: patients with bilateral meniere's disease; patients whose involved ear is the only hearing ear; not suffering from central nervous system disease; patients who do not let to inject. The experimental group contains 20 patients, Patients are divided into two groups and then 27.6 mg of gentamicin is injected to one group and 62.5 mg metylprednisolon is injected to the other group for three week. Finally the groups vertigo, tinnitus and hearing loss are compared 3 to 6 month after the last injection by questionnaires and radiometry.

Health conditions studied

1

Description of health condition studied

Meniere,s disease

ICD-10 code

h81.0

ICD-10 code description

Meniere,s disease

Primary outcomes

1

Description

Vertigo

Timepoint

before treatment and 3 months later

Method of measurement

Questennaire

Secondary outcomes

1

Description

Tinnitus

Timepoint

before treatment and 3 month later

Method of measurement

Questennaire

2

Description

hearing loss

Timepoint

before treatment and 3 month later

Method of measurement

audiometry

Intervention groups

1

Description

intervention group 1- gentamicin with dose 27.6 mg once via intra tympanic injection

Category

Treatment - Drugs

2

Description

intervention group 2- methyl perednosolone with dose 62.5 mg weekly intra tympanic injection in three times

Category

Treatment - Drugs
