Description of health condition studied

Coronary artery disease

ICD-10 code

I25.1

ICD-10 code description

Atherosclerotic heart disease

Primary outcomes

1

Description

analgesic and sedative drugs

Timepoint

One day before intervention until two days after
intervention

Method of measurement

The number of doses of the drug

Secondary outcomes

1

Description

respiration

Timepoint

Before the intervention and after intervention

Method of measurement

The number of breaths per minute

2

Description

heart rate

Timepoint

Before the intervention and after intervention

Method of measurement

The number of heart rate per minute

3

Description

blood pressure

Timepoint

Before the intervention and after intervention

Method of measurement

MmHg

4

Description

pain score

Timepoint

Before the intervention and after intervention

Method of measurement

pain scale score

Intervention groups

1

Description

Intervention group: listening to music in the first two days after surgery, each time for 30 minutes in the morning and afternoon. It is mentioned additional interference when listening to music is not performed on patients. Before the intervention, the pain using a numeric scale of pain and heart rate, RR that can be measured as a measure to reduce the pain. Upon completion of this measure and music above the pre comparison. It is mentioned in the above-mentioned measure only once the intervention sessions

Category

Other

2

Description

Control group: in the first two days after surgery once the heart rate and respiratory rate per minute as well as the intensity of pain was measured using a scale score for pain. And then after half an hour without intervention the patient is re-measured and these values were compared with the previous findings of the study group
