Comparing the effect of group discussion and educational booklet on attitude and practice of nursing students about patients' privacy in Kashan University of Medical Sciences in 2015

Protocol summary

Summary

The aim of this study is to compare the effect of group discussion and educational booklet on attitude and practice of nursing students about patients' privacy. An intervention study will be conducted on a total 60 nursing students of Kashan University of Medical Sciences. Convenience sampling with a randomized allocation in groups will be done. Students who passed two terms of clinical practice will be selected and ones who do not participate in the post-test clinical practice will be excluded. Students are in two classes. Then each class will randomly allocate to one of the educational methods. This study will be done during the students formal clinical education. The outcome is supposed to be different in attitude and practice of nursing students between two educational groups.
