Evaluation of Garlic capsule efficacy for reduction of preeclampsia risk among high-risk pregnant Turkmen women

Protocol summary

Summary

The aim of this study is prevention of preeclampsia, that threatening the life of mother and fetus. This intervention study will be performed as a Double-Blind Randomized Clinical Trial among human subjects. Primigravid Pregnant women in third trimester will be randomly assigned to receive either garlic capsule or placebo capsules (each group 28 subjects). The study outcome, including preeclampsia and drug adverse effects, would be compared across the groups. Physician and Pregnant women are blind about the prescribed capsule. Inclusion criteria are first pregnancy, Turkmen ethnicity, being high-risk for preeclampsia (those with self/family history of preeclampsia), presence of chronic hypertension, lack of hypersensitivity to garlic, and signing the informed consent form. For resolving the problem of cases lost to follow-up, 10% higher than calculated sample population would be enrolled.

Health conditions studied

1

Description of health condition studied
preeclampsia

ICD-10 code
o10.0, o14

ICD-10 code description
Pre-existing essential hypertension complicating pregnancy, childbirth and the puerperium, moderate pre-eclampsia, severe pre-eclampsia

Primary outcomes

1

Description
blood pressure

Timepoint

at 28 week, at 32 week, at 36 week

Method of measurement
The use of mercury blood pressure device

Secondary outcomes

empty

Intervention groups

1

Description
therapeutic intervention with drug(garlic capsule) ,with dose of 800mg, once a day, for 2 month (from the 28th up to 36th week of pregnancy period)

Category
Treatment - Drugs

2

Description
therapeutic intervention with placebo, pharmaceutical starch with dose of 800mg, once a day, for 2 month(from the 28th up to 36th week of pregnancy period)

Category
Treatment - Drugs
