The impact of a school-based nutrition programs and traditional games on health-related physical fitness, nutritional behavior, fundamental movement skills and physical activity level of primary school children

Protocol summary

Summary

The purpose of this study is to evaluate the impact of a school-based nutrition programs and traditional games on health-related physical fitness, nutritional behavior, fundamental movement skills and physical activity level of primary school children. Inclusions criteria consist of 9-10 years healthy student girls and exclusion criteria will be include of absence for three sessions. In line with this, through the students of 4th grade of an elementary school, 32 students will be select and randomly assign into two groups and each group consist of 16 persons including: experimental and control group. Students in the experimental group do traditional games three times per week for 8-weeks and each session will be 70 min. In addition, the nutrition behavior intervention will be consist of thirty-two teaching session for students (four 15-min sessions per week). Body composition, health-related physical fitness, fundamental movement skills and physical activity level will be assess before and after the end of intervention period. The study duration will be 8 weeks and it seems that doing traditional games combine with a school-based nutrition programs can be effective on students body composition, health-related physical fitness, fundamental movement skills and physical activity level.

Health conditions studied

1

Description of health condition studied

Girl students of primary school

ICD-10 code

Z00.1

ICD-10 code description

Routine child health examination

Primary outcomes

1

Description

Health-related Physical Fitness

Timepoint

Before intervention and eight weeks after intervention

Method of measurement

Using measurement of muscle strength and endurance, aerobic power and flexibility

2

Description

Nutritional behavior

Timepoint

Before intervention and eight weeks after intervention

Method of measurement

Using nutritional behavior questionnaire

3

Description

Fundamental movement skills

Timepoint

Before intervention and eight weeks after intervention

Method of measurement

using Test of gross motor development – 2

4

Description

Physical activity level

Timepoint

Before intervention and eight weeks after intervention

Method of measurement

using children physical activity questionnaire

Secondary outcomes

empty

Intervention groups

1

Description

traditional games combine with a nutrition education programs eight weeks, three 70 mins sessions per week including five traditional games combine with four 15 mins sessions per week of nutrition face to face education

Category

Lifestyle

2

Description

Control group Without intervention
