The Effect of Berberis Vulgaris hydro alcoholic extract, On Cutaneous Leishmaniasis patients in comparison with Glucantime and Placebo: A Clinical Trial

Protocol summary

Summary

Objective: Evaluation of the effect of Berberis Vulgaris extract, on Cutaneous Leishmaniasis Specific Objectives: 1-Frequency of age, sex, lesion size, number of lesion, lesion site, lesion kind, leishmania spp. 2- Cure rate in different kind of Cutaneous Leishmaniasis treated by Barberry extract. 3- Cure rate comparison between group 1&2&3. 4- Adverse effect in interventional groups and comparison of them that infected by L. Major and L. Tropica. 5- Cure time comparison between 3 groups. 6- To determine the cure rate in ulcerated and no ulcerated lesions in 3 groups 7- To determine the cure rate on the basis of duration of disease, lesion site, age and sex in the study groups. Location: University's Cutaneous leishmaniasis clinics in Mashhad and Torghabeh Implementation and interventions: the volunteers were divided into 3 groups: Group 1 (whom received topical Barberry extract), Group 2 (whom received topical Barberry extract & intralesional Glucantime), Group 3 (whom received topical Placebo & intralesional Glucantime). Duration of treatment: 8 weeks. Follow up: weekly until 8th weeks. Then 14th week and 3 month after termination of treatment. Inclusion criteria: age $\geq$ 12 years, the number of lesions to 5, limbs and trunk lesions except joint. Exclusion criteria: infection, lack of response in 30 days, lack of directives. Then responsiveness classified to 5 grades: Complete response: decrease in induration and ulcer 100% or getting negative skin smear test Significant response: decrease in induration and ulcer between 76-99% Relative response: decrease in induration and ulcer between 51-75% Partial response: decrease in induration and ulcer between 26-50% Failure: decrease in induration and ulcer $<$ 26%

Scientific title	City
The Effect of Berberis Vulgaris hydro alcoholic extract, On Cutaneous Leishmaniasis patients in comparison with Glucantime and Placebo: A Clinical Trial	Mashhad
Public title	Postal code
The effect of Berberis Vulgaris extract, on Cutaneous Leishmaniasis	Approval date
Purpose	2014-12-03, 1393/09/12
Treatment	Ethics committee reference number
Inclusion/Exclusion criteria	IR.MUMS.REC.1393.201
Inclusion criteria: Presence of cutaneous leishmaniasis with less than 6 months of clinical course; Not receive any treatment 3 months before; Age 8 years and above; Lesion diameter less than 3 cm; The number of lesion less than 5; The lesion on the limbs and trunk with the exception of joints' surface. Exclusion criteria: Pregnancy; Lactating; Receiving simultaneous treatment with other methods during treatment course; History of significance renal, Pulmonary and cardiovascular disease; Create a secondary infection of the wound; Deterioration of the condition of the patient during the study; Immune suppressor drugs consumption; Do not run commands therapy.	Health conditions studied
Age	<u>1</u>
From 12 years old	Description of health condition studied
Gender	Cutaneous Leishmaniasis
Both	ICD-10 code
Phase	B55.1
3	ICD-10 code description
Groups that have been masked	Cutaneous Leishmaniasis
No information	Primary outcomes
Sample size	<u>1</u>
Target sample size: 120	Description
Randomization (investigator's opinion)	Lesion size change
Randomized	Timepoint
Randomization description	Weekly until 8 weeks
Blinding (investigator's opinion)	Method of measurement
Not blinded	Measuring the size of induration and ulcer by caliper
Blinding description	Secondary outcomes
Placebo	<u>1</u>
Used	Description
Assignment	Side effects: erythema, itching
Parallel	Timepoint
Other design features	Weekly
Secondary Ids	Method of measurement
empty	Clinical evaluation
Ethics committees	Intervention groups
<u>1</u>	<u>1</u>
Ethics committee	Description
Name of ethics committee	Intervention group: topical use of Berberis Vulgaris extract three times daily for 8 weeks
Ethics Committee of Mashhad University of Medical Sciences	Category
Street address	Treatment - Drugs
Central Building of Mashhad University of Medical	<u>2</u>
	Description
	Intervention group: injection of intralesional Glucantime weekly for 8 weeks and topical use of Berberis Vulgaris extract three times daily for 8 weeks
	Category
	Treatment - Drugs

3

Description

Control group: injection of intralesional meglumine antimoniate (glucantime) weekly for 8 weeks and topical use of placebo three times daily for 8 weeks

Category

Treatment - Drugs
