Immediate and delayed effects of KinesioTaping on Balance in Subjects with Patellofemoral Pain Syndrom with and without Perturbation

Protocol summary

Summary

Objective:The aim of this study is to immediate and delayed effects of KinesioTaping on Balance in Subjects with Patellofemoral Pain Syndrom with and without Perturbation. **Inclusion criteria:** age between 15-35 years old; Anterior knee pain. **Exclusion ceriteria:** History of surgery in the knee joint; osteoarthritis of knee.

Design:This is a randomized clinical trial study with control group. **Setting:**40 subjects with patellofemoral pain syndrom in 2 groups intervention and control. **Interventions:** the use of tape in the intervention group and balance indices and compare it with the control group. In each measurement, balance tests consisted of three phases without perturbation, anterior-posterior and lateral perturbation stage is that each of these steps within 30 seconds, relax and repeat 3 times done.

Scientific title

Immediate and delayed effects of KinesioTaping on Balance in Subjects with Patellofemoral Pain Syndrom with and without Perturbation

Public title

The effect of Kinesio Tape in Subjects with Patellofemoral pain syndrom

Purpose

Prevention

Inclusion/Exclusion criteria

inclusion criteria: age between 15-35 years old; Anterior or retropatellar pain No history of trauma that lasts at least a month; pain was aggravated by at least two of the following kneeling, squatting, running hopping/jumping, stair climbing; minimum and maximum in visual analog scale 3-7; No physical therapy the last month. **Exclusion ceriteria:** Unwillingness to participate in the project; History of surgery in the knee joint; osteoarthritis of knee; Any traumatic, inflammatory and infectious pathology in the lower extremity; Dislocation

or subluxation of patella; meniscus or ligament of damage; problems with vision, auditory and vestibular system; neuromuscular deficit; inability to understand and how to test.

Age

From **15 years** old to **35 years** old

Gender

Female

Phase

Health conditions studied

1

Description of health condition studied

Injury of knee and lower leg

ICD-10 code

s86.2

ICD-10 code description

Injury of muscles and tendons of anterior muscle group at lower leg level

Primary outcomes

1

Description

movement of center of pressure

Timepoint

before and 10 minutes after intervention and 48hours after intervention

Method of measurement

In millimeters

2

Description

Ground reaction force

Timepoint

before and 10 minutes after intervention and 48hours after intervention

Method of measurement

In Newton

Secondary outcomes

empty

Intervention groups

1

Description

In the intervention group, the kinesiotape of patella mechanical correction technique and tension by 50% and the balance test during the third stage without the perturbation, anterior-posterior and lateral perturbation with a duration of one minute rest between stages and has done three times.

Category

Prevention

2

Description

In the control group, the test balance test during the third stage without the perturbation, anterior-posterior and lateral perturbation with a duration of one minute rest between stages and has done three times.
