Effect of povidoneiodine pleurodesis in malignant pleural effusion

Protocol summary

Summary

In this research we evaluating effect of povidoneiodine in pleurodesis of massive pleural effusion. This single-center study was designed without blind and placebo. All patients with a history of malignant pleural effusion and dyspnea will be entered in study. If the patient does not wish to participate in the study or known case of renal dysfunction and thyroid disease will be excluded. Chest tube will be inserted and drainage of pleural effusion of the patients and after that, pleurodesis with povidone iodine will be considered. The success rate at specified intervals checked by chest radiograph. Kidney and thyroid function tests before and after pleurodesis study and laboratory changes will be recorded.

Health conditions studied

1

Description of health condition studied

pleural effusion

ICD-10 code

C78.2

ICD-10 code description

Secondary malignant neoplasm of pleura

Primary outcomes

1

Description

successful pleurodesis

Timepoint

2 weeks- 4 weeks- 6 months after intervention

Method of measurement

chest X ray

Secondary outcomes

1

Description

BUN

Timepoint

before intervention-first day after and 4 weeks later

Method of measurement

laboratory test

2

Description

serum creatinin

Timepoint

before intervention-first day after and 4 weeks later

Method of measurement

laboratory test

3

Description

TSH

Timepoint

before intervention-first day after and 4 weeks later
