Comparison effect of Calendula and Turmeric(Curcuma Longa) ointment on healing and pain severity of episiotomy in primiparous women attending selected hospital of shiraz university of medical sciences 2015-1016.

Protocol summary

Summary

My objective is to test the comparison effect of Calendula and Turmeric(Curcuma Longa) ointment on healing and pain severity of episiotomy in primiparous women. 90 women who have episiotomy will be randomly divided into 2 intervention and 1 control group. one of the Intervention group will use Calendula ointment the other group will use Turmeric(Curcuma Longa) ointment on episiotomy incision every 8 hours. Control group will use Placebo on episiotomy incision. All groups in the ointment, receive routine care hospital. Our scale to check the wound healing is REEDA table. We check the healing process before and 3,7,10 , 14 days after intervention. Our scale to check the pain reliving is VAS ruler. We check the pain before and 3,7,10 , 14 days after intervention.

Health conditions studied**1****Description of health condition studied**

Episiotomy

ICD-10 code

O90.1

ICD-10 code description

Disruption of perineal obstetric wound

Primary outcomes**1****Description**

Severity of episiotomy pain

Timepoint

Before intervention then 3,7,10,14 days after intervention

Method of measurement

Visual Analogue Scale(VAS)

Secondary outcomes**1****Description**

Healing of episiotomy

Timepoint

Before intervention then 3,7,10,14 days after intervention

Method of measurement

REEDA (Redness, Edema, Ecchymosis, Discharge, Approximation).

2**Description**

Number of Mefenamic acid capsules used

Timepoint

Tenth day after delivery

Method of measurement

count of remaining Capsules

Intervention groups**1****Description**

Group1: mothers put Calendula on episiotomy 3 times a day of a knuckle until 7 days after birth.

Category

Treatment - Drugs

2**Description**

Group2: mothers put Turmeric on episiotomy 3 times a day of a knuckle until 7 days after birth.

Category

Treatment - Drugs

3

Description

Control group: mothers put Placebo on episiotomy 3 times a day of a knuckle until 7 days after birth.

Category

Placebo
