The effect of music therapy on comfort rate and some vital signs of patients undergoing hemodialysis

Protocol summary

Summary

Objectives: The present study will intend to determine the effect of music therapy on the amount of comfort and some hemodynamic parameters of patients undergoing hemodialysis. Design: Clinical trial. Setting and conduct: 74 people will select from the hemodialysis patients in Hajar and Besat Hospitals, who will select by accessible method and based on the days (even or odd days). 37 people will allocate to the test group and 37 to the control group. Major Inclusion criteria: The patient has been undergoing hemodialysis for more than six months; Do not have a known history of psychiatric diseases; Do not suffer from hearing impairments which prevents using headphones. Major Exclusion criteria: Unstable hemodynamic status; Acute pain in other parts of the body; Developing cardiac and pulmonary disorders. Interventions: A pre-test will conduct before hemodialysis using a comfort questionnaire in both the test group and control group and the vital signs will record. Music will play only for the test group during hemodialysis in three sessions, and no special action will take on the control group. After each hemodialysis session the vital signs will record, and the post-test will conduct. Main outcome: Comfort; Blood pressure; Heart rate.

Scientific title

The effect of music therapy on comfort rate and some vital signs of patients undergoing hemodialysis

Public title

The effect of music on comfort and vital signs of hemodialysis patients

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: The patient is willing to enter the study; Does not use narcotics (as it interferes with and adversely affects the result of the study in respect of the

pain); More than six months has elapsed since the hemodialysis was started, and it is stable; Undergoes hemodialysis only three times a week; Does not attend as a guest from other centers; Is able to understand Farsi; Does not have a known history of psychiatric diseases; Likes music; Does not use another music during the intervention; Is between 30 to 85 years of age; Does not suffer from hearing impairments which prevents using headphones. Exclusion criteria: Unstable hemodynamic status; Acute pain in other parts of the body; Developing cardiac and pulmonary disorders; The patient's unwillingness to hear music.
