The effects of physical exercise on positive emotion and vitality of primigravid women

Protocol summary

Summary

This study has been designed to evaluate the effect of childbirth preparation classes emphasizing on physical exercise on the positive emotion and vitality of nulliparous pregnant women in 2015. Sampling is done by random sampling method. The study population consists of all nulliparous pregnant women attending prenatal clinics of Health Network at Famenin city. Inclusion criteria: 20-28 weeks gestational age; absence of anxiety and depression; avoiding the use of psychotropic drugs before pregnancy and during the current pregnancy, according to patient records in Health Center and the doctor's visits; normal and planned pregnancy without obstetric and medical complications. Exclusion criterion: twice or more absences in classes; the incidence of horrible life events, such as death of a spouse, divorce, etc.; medical and obstetric problems during the study; diagnosis of fetal malformation or death during the study. A sample of 50 women in the test group and 50 women in the control group are determined. In the test group, 50 people are selected by draw method and using the numbers of their records. Then among nulliparous pregnant women eligible for inclusion in the study who wish to attend classes in preparation for childbirth, 50 women selected by the same method and placed in the control group. In the test group, antenatal educations are done with special emphasis on physical exercises and relaxation, and the control group members receive usual clinic cares. The main variable in this project is the positive emotion and vitality.

Intervention groups

1

Description

Intervention group: The classes will be held every two weeks for an hour and a half, for 8 times, with a maximum of 10 pregnant women, and includes 5 minutes of greetings, 30 minutes of training, 10 minutes for questions and answers, 30 minutes of physical exercise, and 10-15 minutes of relaxation, and the last 10-15 minutes is dedicated to video playback and questions and answers. Mothers wear comfortable clothes at the time of exercises and do their workouts with the trainer for 30 minutes at a suitable place. Mothers are recommended to do exercises and relaxation at home every day, and every two days, mother will receive a phone call, and they will be encouraged to exercise at home. After 36 weeks of the end of the classes, the questionnaires will be completed again by test group. Then the data analysis will be conducted and the results of the impacts of training and exercise classes on positive affection and vitality before and after the intervention
