The Effects of 8 weeks aerobic interval training on Vaspin serum level in type2 diabetic women

Protocol summary

Summary

The aim of this study was the investigation of the effect of 8 weeks aerobic interval training on Vaspin serum level in type2 diabetic women. This study is a phase 3 trial that not blinded with a pre-test and post-test and it is done with Quasi-experimental method. For this purpose, 18 women are selected with a history of type 2 diabetes and they were divided into two experimental (n=9) and control (n=9) groups. The aerobic interval training Program was performed respectively 3 minutes of activity, with intensity 70% of maximum heart rate and 2-minute active rest and walk slowly with the intensity of 45-50% of maximum heart rate with 6 replications. According to the fitness level of the patient the severity and number of times were added during a two-month training courses. Serum vaspin concentrations were measured 48 hours before and after the protocol of training by ELISA methods.

Scientific title

The Effects of 8 weeks aerobic interval training on Vaspin serum level in type2 diabetic women

Public title

Effects of aerobic interval training on the treatment of Type 2 diabetes

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Women with type 2 diabetes. People that they have diseases such as blood fat , blood pressure : Exclusion criterias

Age

From **45 years** old to **60 years** old

Gender

Female

Phase

Groups that have been masked*No information***Sample size**Target sample size: **18****Randomization (investigator's opinion)**

Health conditions studied**1****Description of health condition studied**

Type2 Diabetic

ICD-10 code

E11

ICD-10 code description

Non-insulin-dependent diabetes mellitus

Primary outcomes**1****Description**

Serum Vaspine level

Timepoint

After 12 hours of fasting, at 7 or 8 am done. And 48 hours after the last training session

Method of measurement

Using ELISA Kit for Human vaspin company according to the manufacturer's instructions was measured BIOASSAY

Secondary outcomes

empty

Intervention groups**1****Description**

Intervention group: The exercise protocol was performed respectively 3 minutes of activity, with intensity 70% of maximum heart rate and 2-minute active rest and walk slowly with the intensity of 45-50% of maximum heart rate with 6 replications
