Effect of melatonin tablets compared to lorazepam tablets on circadian rhythm of sleep and serum level of leptin and cortisol and melatonin in CABG patients admitted in heart ICU ward of Mousavi hospital, Zanjan

Protocol summary

Summary

In this double blinds clinical trial, 80 patients who are candidate for coronary artery bypass grafts in ICU open heart surgery ward get to study serially if they will be satisfied to cooperate in this study. Inclusion criteria: age older than 18 years old; GCS ≥ 10 ; stable hemodynamic state; no dependence on the ventilator. Exclusion criteria : pregnancy; sleep disorder; convulsion; neuropsychiatric disorders; blindness and deafness; liver and kidney disorders; CHF; gastroparesia; drugs that reduce melatonin effect; sensitivity to melatonin; worsening of overall health; earlier discharge from the sixth day. After personal information questionnaire (proposal index) completion for all patients, the patients will be assigned to two groups randomly that includes melatonin tablet receivers and lorazepam tablet receivers. In the morning of hospitalization day, 5 cc venous blood samples will be taken from all the patients in this study to assess blood levels of leptin, melatonin and cortisol. The patients of two groups will take 3mg melatonin tablet for four nights at 21 o'clock of every night (for 40 patients of first group from second day to fifth stay day) and 2 mg lorazepam tablet for four nights at 21 o'clock of every night (for 40 patients of second group from second day to fifth stay day). After four nights, 5 cc venous blood samples will take from all patients to measure serum levels of leptin, melatonin and cortisol. Standard Sleep Disorders Questionnaire (SSS) is used to assess quality of sleep at former night of operation and fourth night of hospitalization.

Scientific title

Effect of melatonin tablets compared to lorazepam tablets on circadian rhythm of sleep and serum level of

leptin and cortisol and melatonin in CABG patients admitted in heart ICU ward of Mousavi hospital, Zanjan

Public title

The effect of melatonin tablet on sleep disorders in patients in cardiac surgery intensive care unit

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: age older than 18 years old; GCS \geq 10; stable hemodynamic state; no dependence on the ventilator. Exclusion criteria: pregnancy; sleep disorder; convulsion; neuropsychiatric disorders; blindness and deafness; liver and kidney disorders; CHF; gastroparesia; drugs that reduce melatonin effect; sensitivity to melatonin; worsening of overall health; earlier discharge from the sixth day.

Age

From **18 years** old to **85 years** old

Gender

Both

Phase

2-3

Groups that have been masked

Health conditions studied

1

Description of health condition studied

Sleep disorders

ICD-10 code

G47.2

ICD-10 code description

Circadian rhythm sleep disorders

Primary outcomes

1

Description

Sleep disorders

Timepoint

First nights and the fourth night stay

Method of measurement

Stanford Sleep Scale Questionnaire (SSS Questionnaire)

2

Description

Serum leptin level

Timepoint

Second and fifth day of hospitalization

Method of measurement

Germany laboratory elisa kits

3

Description

Serum melatonin level

Timepoint

Second and fifth day of hospitalization

Method of measurement

Germany laboratory elisa kits

4

Description

Serum cortisol level

Timepoint

Second and fifth day of hospitalization

Method of measurement

Germany laboratory elisa kits

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group 1: 40 patient in Melatonin group will take 3 mg melatonin tablet for four nights

Category

Treatment - Drugs

2

Description

Intervention group 2: 40 patient in Lorazepam group will take 2 mg lorazepam tablet for four nights.

Category

Treatment - Drugs
