Effect of intravenous Vasopressin versus Norepinephrine on correction of cardiac function and renal function in low cardiac out put patient

Protocol summary

Summary

In this double blind clinical trial, 40 patients admitted in cardiac department that candidate for CABG, if prefer to accomplish in study are selected within including and excluding factors. All of them complete personal information sheet then the patients randomized divided in two groups. One group receipt Vasopressin and other group receipt Norepinephrine. In the day of admission 2ml blood sample taken in order to study about Blood Urea Nitrogen and Creatinin. In both group before surgery arterial line fixed and blood sample taken for Arterial Blood Gas study. For first group Vasopressin infusion recommended (0.3 µg/kg). For the other group Norepinephrine infusion recommended (5 µg/min). After end of surgery and before patient transfer to ICU, ABG sample taken and Echocardiography accomplish. 24hour after surgery 2ml blood sampl taken in order to study about Blood Urea Nitrogen and Creatinin and investigate renal function. 24hour after surgery hemorrhage volume in both group measured.

Scientific title

Effect of intravenous Vasopressin versus Norepinephrine on correction of cardiac function and renal function in low cardiac out put patient

Public title

Comparison effect of intravenous Vasopressin versus Norepinephrine on correction of cardiac function and renal function in low cardiac out put patient after CABG in Mosavi hospital at 1394

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: age 30yr and more; cardiac output more than 30%; ASA class 1 Exclusion criteria: severe cardiac arrhythmia; heart failure; cardiogenic shock; unstable hemodynamic; diabetes mellitus; pulmonary disease; vascular disease; pulmonary HTN; pathologic

change of liver;emergency CABG

Age

From **30 years** old to **90 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **40**

Health conditions studied

1

Description of health condition studied

Coronary Artery Disease

ICD-10 code

I25.1

ICD-10 code description

Atherosclerotic heart disease

Primary outcomes

1

Description

Left Ventricular Contraction

Timepoint

Before intervention and 4 days afeter intervention

Method of measurement

Echocardiography

2

Description

Mean Arterial Pressure

Timepoint

Before surgery ,Before CPB,During CPB,After CPB and before transer to ICU

Method of measurement

Invasive Blood Pressure Monitoring

3

Description

Serum Creatinin

Timepoint

Before surgery and before transer to ICU

Method of measurement

Laboratory Elisa kit

4

Description

Volume of Hemorrhage

Timepoint

End of surgery and every 6 houre until 24 houres after end of surgery

Method of measurement

Mililiter

5

Description

BUN

Timepoint

Before surgery and before transer to ICU

Method of measurement

Laboratory Elisa kit

Secondary outcomes

empty

Intervention groups

1

Description

Intrvention group1:Vasopressin Start infusion of vasopressin0.3µg/kg at off pump time and continu to end of surgery

Category

Treatment - Drugs

2

Description

Intervention group2:Norepinephrine Infusion of

Norepinephrine at off pump time and continue until end of surgery

Category

Treatment - Drugs
