

Clinical Trial Protocol

Iranian Registry of Clinical Trials

07 Jul 2026

The effects of magnesium and vitamin D supplement on muscle strength, muscle function, and inflammatory markers in middle-aged women.

Protocol summary

Study aim

Resolving the deficiency of vitamin D and magnesium in order to improvement of muscle strength, muscle function, and inflammatory markers in middle-aged women

Design

A concealed, randomized, blinded, sham controlled clinical trial with a parallel group design of 90 participants , enrolled between March 2018 and November 2018

Settings and conduct

1.90 employer from age of 40 to 55 in all of campuses of Iran University will be participated in randomized double blind placebo-controlled trial.2.10 cc blood vein will be taken, anthropometric variables and muscle strength in hand and foot will be measured.3.The intervention group will receive 250 mg per day and 50000 IU vitamin D per month.The control group will receive the placebo of them.

Participants/Inclusion and exclusion criteria

Middle-aged women working in Iran University Of Medical Science and subsidiary health centers who has expressed the willingness to cooperate,Aged 40-55 years old,BMI more than 25 kg/m² and serum vitamin D levels less than 25 ng/ml/ In case of pregnancy and breastfeeding, having chronic disease,taking any supplements at least in the last 3 months and cigarette smoking the volunteers will not enter to study.

Intervention groups

Middle-aged women working in Iran University Of Medical Science and subsidiary health centers who has the inclusion criteria and expressed the willingness to cooperate

Main outcome variables

Improvement of muscle strength in hand and foot

Scientific title

The effects of magnesium and vitamin D supplement on muscle strength, muscle function, and inflammatory

markers in middle-aged women.

Public title

The effects of magnesium and vitamin D supplement on muscle strength, muscle function, and inflammatory markers in middle-aged women.

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria:

Voluntary participation Age from 40 to 55 years old
BMI \geq 25kg/m² Having serum vitamin D less than 30
ng/ml

Exclusion criteria:

Age

From **40 years** old to **55 years** old

Gender

Female

Phase

3

Groups that have been masked

- Participant
- Investigator

Sample size

Target sample size: **90**

Randomization (investigator's opinion)

Randomized

Randomization description

For randomized allocation performing, permuted block randomization will be used by quadrilateral blocks. According to the sample size of 90 subjects, 23 blocks will be generated using the online site (www.sealedenvelope.com). In order to allocation concealment in the randomized process, unique codes will be used on the drug boxes that is generated by the software. Participants will enter based on the sequence produced into study and the drug packets with code registered will allocate to the individual. Therefore, before participants selection, they will be unaware of the type of intervention that will receive, as well as a random sequence produced during the study will be immune from prediction.

Blinding (investigator's opinion)

Double blinded

Blinding description

In order to performing the double-blinded of study, before study beginning, the canisters containing tablets can be provided by someone other than the researcher, and the placebo tablets in appearance are similar to the supplementation tablets and the researcher are not be aware about the allocation of studied subjects in each group during the evaluation of the studied outcomes until the end of the intervention period.

Health conditions studied

1

Description of health condition studied

Sarcopenia, muscle weakness, decrease of muscle
strength

ICD-10 code

M62.5

ICD-10 code description

Muscle wasting and atrophy ,not elsewhere classified

Primary outcomes

1

Description

Improvement of muscle strength in hand and foot

Timepoint

Before the intervention and two months later of
intervention

Method of measurement

Dynamometer, Handgrip

Secondary outcomes

1

Description

hs-CRP

Timepoint

Before the intervention and two months later of
intervention

Method of measurement

immunoturbidimetry

2

Description

TNF- α

Timepoint

Before the intervention and two months later of intervention

Method of measurement

Concentration of TNF- α in serum using ELISA kit

3

Description

IL-6

Timepoint

Before the intervention and two months later of intervention

Method of measurement

Concentration of IL-6 in serum using ELISA kit

Intervention groups

1

Description

Intervention group: Daily intake of one magnesium supplement (250 mg) and weekly intake of vitamin D (50000 IU) for 8 weeks (2 months)

Category

Treatment - Drugs

2

Description

Control group: Daily intake of one placebo magnesium tablet (containing Maltodextrin) and weekly intake of one vitamin D tablet (containing Maltodextrin) for 8 weeks (2 months)

Category

Placebo

Title and more details about the data/document

Only a section of the data, such as primary outcomes information or the like, will be shared.

When the data will become available and for how long

Access period start 6 months after results publishing

To whom data/document is available

The obtained data from current study will be available only for working researchers in academic and scientific institutions

Under which criteria data/document could be used

Six months after the published papers from this study, the obtained data will be available to the researchers for further analysis

From where data/document is obtainable

Applicants can be communicated to correspond author by e-mail or postal address to receive the requested data. Postal address: Nutrition Department, School of Public Health, Iran university of Medical Sciences, Hemat Express way, Tehran Cell phone:+98 21 8670 4743 Email:vafa.m@iums.ac

What processes are involved for a request to access data/document

Applicants will be given access to the obtained data from current study by sending an email to the correspond author
