Study of the effect of an intervention based on social marketing model on selecting normal vaginal delivery by prim gravid pregnant women

Protocol summary

Summary

Aims: Aim of this study is evaluation of the effect of an intervention based on social marketing model on selecting normal vaginal delivery by prim gravid pregnant women in Boyrahmad city. **Design:** The study population is all pregnant women with prim gravid in Boyrahmad city. **Method:** This study has three phases: design, implementation and evaluation. A formative research (Qualitative and Quantitative research) is used in designing phase. Phenomenological qualitative research is based on modified social marketing model and purposeful sampling will be used. In qualitative study data are collected in depth interviews with primigravida pregnant women and focus group discussions with their health care providers. Data for the quantitative study will be collected using Standard questionnaire based on theory of planned behavior. Educational and interventional programs are developed based on formative research data's analysis. One month after the intervention among study population, intending to choose mode of delivery is measured again and data will be compared with the baseline situation. **Participants:** Study population is primigravida pregnant women with 3 and 4 months gestational age. Women who have not prenatal care records will not be included in the study. **Interventions:** Interventions of this plan will be determined after formative research. So, at this stage intervention program and training materials are not determined. **The main outcome variables:** primary outcome variable is intending to choose mode of delivery. Secondary outcome variable is type of delivery that will be done by target group.

Health conditions studied**1****Description of health condition studied**

Elective Cesarean

ICD-10 code

O82.0

ICD-10 code description

Delivery by elective cesarean section

Primary outcomes**1****Description**

Intention of delivery mode selection

Timepoint

Before the intervention and 1 month after the intervention

Method of measurement

Questionnaire

Secondary outcomes**1****Description**

Type of childbirth done by woman

Timepoint

2 months after the intervention

Method of measurement

Investigating of pregnancy records or callinn with mother

Intervention groups**1****Description**

Intervention will be developed based on formative research data analysis. It dose not define in this stage of study.
