The effect of Kaaser capsule (Zingiber Officinale, Carum Capticum, Piper Nigrum) on functional bloating and comparison with Dimethicone capsule; Clinical Control Trial.

Protocol summary

Summary

The purpose of the study is to compare the effect of "Kaaser" capsule (Zingiber Officinale, Carum Capticum, Piper Nigrum) with Dimethicone capsule and placebo on functional bloating. One hundred twenty 20-50 years old patients who recourse Ayatollah Rouhani hospital with considering inclusion and exclusion criteria, will enter the study. Enrolling in 3 groups of "Kaaser" capsule, Dimethicone capsule, and placebo cases will be done with simple sampling and random allocation. Design and performance of the study are double blind. The cases are obtained written informed consent and will explain them that enrolling in the groups is randomly. The forms of demographic information will be completed and also severity and frequency of bloating and early satiety (based on Visual Analogue Scale) before enrolling in to the study. Drugs in 3 groups will given in 500 mg capsules TDS. Severity and frequency of Bloating will evaluated, 2 weeks after starting the study and 2 weeks and 2 months after finishing the study. And early satiety will evaluate 2 weeks of starting the study and those will written and compared with the baseline data.
