The effect of ankle kinesio taping on postural control in 30-60 years old stroke patients.

Protocol summary

Summary

The primary aim of this study was to investigate the effect of the application of ankle kinsio taping on the postural control in 30-60 years old stroke patients. 40 stroke patients divided 2 group intervention and control. Inclusions criteria for stroke patients : age range 60-30 years and at least 1 year after the stroke. We performed ankle kinesio taping (KT) for 24h. It was applied by KT expert by stretching the kinesio tape. Initially, a tape anchor is placed above the malleoli of the affected lower extremity. This anchor is applied securely but not tightly around the extremity. Five or six tape straps are started from the anchor in the area of the medial ankle. They are applied around the bottom and up the lateral side of the foot. The ends of the first of these straps are attached to the lateral ankle. Subsequent straps are applied across the bottom of the foot progressively more distally and are attached progressively more anteriorly and medially on the ankle. for the kinesio taping application .postural control assess by force plate before, immediately and 24 hours after of the kinesio taping application. We expect that kinesio taping improve postural control in stroke patients.

Scientific title

The effect of ankle kinesio taping on postural control in 30-60 years old stroke patients.

Public title

Effect of kinesio taping on postural control in stroke patients.

Purpose

Treatment

Inclusion/Exclusion criteria

The inclusions criteria for stroke patients: age range 60-30 years: at least 1 year after the stroke: stroke patients with anterior artery on the CT scan: high and

moderate balance according berg balance scale (score 56-21): grade 2 and 3 of spasticity on Ashworth scale: not used muscle relaxant and tranquilizers drugs from 24 hours ago: Ability to stand with eyes closed and open with feet apart for at least 30 seconds: Ability to understand instructions: The ability to easily change directions. Exclusion criteria: acquired brain injury: lower limbs fracture: a history of lower limbs surgery: dislocation in lower limb joints: sacroiliac joint dysfunctions: low back pain : blindness and deafness: allergy to kinsiotape:balance disorder and middle ear problems: diabetes and neuropathy.
