Evaluation of the effect of topical Sesame Oil in the Prevention of Chemotherapy-Induced Phlebitis in 17 Shahrivar Hospital

Protocol summary

Summary

Purpose: This study will be conducted to determine the effect of external use of Sesame oil (SO) in prevention of chemotherapy-induced phlebitis. Materials & Methods: 60 patients with Acute Lymphocytic Leukemia(ALL), who admitted for chemotherapeutic management, will be enrolled in a clinical trial and they will be randomly divided in two equal, control & intervention, groups. They will use 10 drops of SO every 12 hours, two times a day, from the first day of chemotherapy up to the thirtieth day. In control group liquid paraffin as placebo. The amount and method of using liquid paraffin is as exactly same as using of sesame oil in the experimental group. Data tools included a bipartite questionnaire (demographic Q & clinical Q) and Visual infusion phlebitis Scale (VIP) for measurement of phlebitis in two groups.
