Intervention groups

1

Description

The interventional group received 2 psychological-training counseling sessions of 45 to 60 minutes with the interval of a week regarding the anatomy of the urinary tract and reproductive health, nutrition and its effect on urinary tract infections, sex and its relationship with urinary tract infections and the complications of urinary tract infections in pregnancy. At the end of each session, FAQ was conducted, and at the end of the second consulting session, a pamphlet containing a summary of the expressed subjects were given to them. Then four supportive counseling sessions in frequent telephone follow-up were conducted for a month focusing on observing the trained issues.

Category

Lifestyle

2

Description

However, it was not conducted any intervention for the control group. The relevant questionnaire was completed by both groups before the intervention and one month later.
