The effect of Rosa damascene extract on anxiety rate and sleep quality candidate angiography:A double-blind randomized controlled trial

Protocol summary

Summary

The aim of this study was the effect of Rose damascenes extracts on anxiety rate and sleep quality. In this randomized clinical trial, 90 patients were randomly allocated to two groups: intervention and control group (45 patients in each group).The study will be conducted on cardiac patients hospitalized in CCU of Rajae hospital in Karaj. In both groups at the first day of admission, Sent merry sleep questioner and Espiel berger questioner for anxiety will be completed then in intervention group 24 hours before angiography(every 8 hours,15drop Rose damascene extract) and in control group 24 hours before angiography (every 8 hours,15drop placebo)will be given. In the morning of angiography day in both groups, both questioners will be completed. This clinical trial is double blind and scholar and patient are unaware about drops contents.
